

# BIO-K

## FOR KITCHEN DRAINS

## WORKS BIOLOGICALLY

Using enzymes to breakdown fats, grease and organic material which build up in your pipes.

### WHY USE IT?

To stop drains slowly blocking with grease, food particles, Hair, shampoos and organic build-up.

While harsh chemical drain openers can remove blockages, they do little to address the requirement for a product that is safe and can be dosed as part of a preventative maintenance system.

Bio K coats the drain system with special enzymes that cling to the build-up and digest it: not just at the drain, but all the way down the length of the pipe.

The further advantage of an enzyme based product is that it does not pose a risk to pipe-work and drains. When it reaches the treatment plant, there are no toxic effects as can be experienced using detergents high caustic or acid cleaners. **BIO-K** continues to work for days after the initial use.

Dosages depend on the amount waste that goes down the sink and the frequency that the product is used. Because the product is biological, it works best when dosed little and often. There are two main rules :

1. Dose when it is quiet so that the product has time to sit in the pipes
2. Dose enough Bio K so that it goes past the U bend and works all the way down the pipes.

The product shouldn't be used if the drain is fully blocked. At that stage it is too late and the pipes would need to be manually cleaned out
